Experiences

Screen Labs, Remote, Freelancing

Software engineer

February 2020 – March 2023

- Actively contributed to the development of several systems, notably implementing efficient synchronization between multiple server instances using pubsubs and Redis cache.
- Developed and maintained a structured mono-repo, divided into two main types of modules: systems and servers.
- Created an image for Docker compose, integrating all systems and their essential dependencies.
- Automated server publishing and startup through Docker Swarm, driven by GitHub Actions.

Senior Studios, Remote, Freelancing

Software engineer

January 2020 – December 2020

- Developed solutions for several systems, mainly using Spring Boot and Ktor.
- Offering a variety of services for small/medium-sized companies.
